INVENTING VISIONS FOR YOU

As your leading partner for polyurethane chemistry, we know you are competing in increasingly challenging environments: Your customers are becoming more and more demanding in their expectations for the quality, durability, sustainability and aesthetics of products. And they have more choices. For you this means that cost pressure is rising – while innovation cycles are becoming faster and faster.

Helping you to turn this challenge into your competitive advantage is the goal that drives our daily work. We call it: INVENTING FOR YOU. But what exactly are the basic values underlying this promise? What principles enable us to improve your productivity, drive sustainability, ensure reliability and co-create future-proof businesses? First and foremost, we are curious. Because only if we listen closely to you and ask the right questions can we respond to your individual needs with new, creative and unexpected solutions that make a real difference to you. That's why inventing for us always starts with thinking about your unmet business challenges. It requires an in-depth understanding of your needs along the whole value chain. To ensure that what we invent stands the test of time. Living up to this aspiration requires more than competencies – it calls for a corporate culture of being courageous. A culture that is defined and lived by dedicated people who cooperate to push the boundaries of invention founded on knowledge and experience. Our courage permeates our entire business – from partnerships to business models. This is also reflected in our colorful business philosophy. We appreciate partnerships that go beyond traditional black-and-white ways of acting and thinking. An attitude of openness that invites you to co-create new things – enabling you rather than just providing. We are optimistic and resourceful in finding solutions that inspire our customers and partners.

This set of fundamental values adds up to an unrivaled performance orientation to constantly strive for something better, be it through big or small changes. A true sense of business regardless of function. And a deep commitment to delivering our promise everyday. Anywhere. Again and again.

INVENTING FOR YOU.

Protecting and enhancing the beauty of wood

Everyone needs to live, eat and store clothes, cutlery, books, toys and numerous other things. Although these needs have remained more or less unchanged for centuries, the style and size of tables, shelves, cabinets and other pieces of furniture have changed very much. In the past, solid wood was the only material used for manufacturing furniture. Nowadays, we use a variety of wood-based materials or composites in combination with glass, plastic, ceramic or metal. The need to protect the surface of furniture depends on the type of substrate used and the usage patterns. Traditionally, solid wood and veneered furniture have been the substrates that convey haptic comfort, coziness, and a natural look and feel. If you look around, you will find more wooden substrates, such as the flooring that gives you a solid surface to walk and play on, or your door, a visiting card to any home. These wooden substrates need to be protected against chemical influences such as hand creams or scratches caused by keys or children's toys.

Covestro helps to bring the warmth of pure wood and the colorful beauty of wood-based parts into the homes of end consumers. We are constantly in dialog with the industry players to determine

specific industry needs and develop solutions that help manufacturers to produce high-quality products – today and tomorrow.

In view of current changes in market trends, regulations and VOC in general, we are developing resins, hardeners and dispersions to be used as the basis for high-performance coatings for our coating customers. We provide answers to the issues of indoor air quality, self-cleaning and healing surfaces, as well as high chemical and mechanical resistance. After all, we have solutions for wood-based products that give you the soft and natural touch of natural wood and also the required protection against stains and abrasion.

Whether one-component, two-component or UV-curing, our waterborne polyurethane coating raw materials provide suitable answers to your coating formulation requirements. In line with our mission "To make the World a brighter place," we are constantly improving our products to enable you to formulate polyurethane-based coatings that fulfill the highest performance demands and current or upcoming environmental standards in this industry.

Today's top trends in surface protection

- **Consumer health awareness:** A growing sense of health consciousness is driving the trend towards waterborne solutions for wood coatings. This trend is also a direct response to the increasing demand for a more responsible use of our planet's limited resources and increasing environmental awareness. Waterborne wood coatings are less harmful to the environment and human health than solvent-borne products.
- **Sustainability/longevity:** The growing demand for surfaces that are durable and look good for longer – triggered not least by the sharing economy – as well as higher-than-ever consumer expectations is influencing present-day and future surface technologies.
- **Biobased raw materials:** Renewable raw materials are becoming an increasingly important factor in the responsible use of natural resources and reduction of greenhouse gas emissions.
- **Natural, honest materials:** In our increasingly fast-moving, volatile and uncertain world, the desire for a sense of comfort, homeliness and well-being is greater than ever. Natural look-and-feel surfaces and substrates seek to satisfy such desires.
- **Automation:** As globalization heightens the cost pressures on furniture manufacturers or joinery firms in Europe, they are increasingly seeing automation ("Industry 4.0") as the solution to this challenge.

Helping you meet market demands

At Covestro, we help to bring the warmth of pure wood and the colorful beauty of wooden structures and components into domestic and work environments. We regularly talk to key industry players to determine your specific needs and develop solutions that help manufacturers to produce high-quality wood products. In response to today's trends we are developing resins, hardeners and dispersions to be used as a basis for high-performance coatings. We are providing answers to the issues of indoor air quality, easy-to-clean and self-healing surfaces, as well as high chemical and mechanical resistance. We engage with our partners to find solutions for your day-to-day operations, and by applying our own insight and foresight methods, we can also help you get fit for the future.

We strive to offer a variety of solutions with the aim of reaching perfection. We achieve this through the ongoing work of our specialist teams, driven by the desire to continually improve our products and services. This involves a constant search for new solutions, each one more economical, more environmentally friendly, and more advanced than preceding products. This is the path we have taken, and the challenge that inspires us. Today and tomorrow.

Building blocks for sustainable performance and process efficiency

Solutions to enhance your process efficiency

Nowadays, the quality demands made on industrial processes are very high. This is equally true of the cost-cutting requirements. However, both goals can be achieved by increasing process efficiency. At Covestro we have a wide range of solutions designed to enhance your process efficiency. Why not take advantage of our know-how? These solutions will benefit your bottom line.

Sustainability

Sustainability is at the heart of the Covestro strategy. We inspire innovation and drive growth through profitable products and technologies that benefit society and reduce the impact on the environment.

Our coatings, adhesives and specialty products and solutions contribute to sustainability through:

- **Saving energy – fast and smart**

Polyurethane systems represent a benchmark in productivity and process efficiency in many industries. We strive to further push the limits of efficiency by developing game-changing new solutions.

- **Reducing waste**

We offer solutions such as innovative 1K technologies that enable our value chain partners to use materials more efficiently and reduce waste.

- **Cutting emissions**

Bayhydur® and Desmodur® grades are key enablers for low-emission solutions in the coatings and adhesives industries – waterborne and high solids/100% solids!

- **Responsible management of natural resources**

Highly durable PU-based coatings and adhesives significantly extend the lifetime of a coated product and thus help to prolong resource use.

- **Closing the loop (circularity)**

Through economically viable products made from biobased raw materials – with no deterioration in performance – we help our customers and value chain partners to reduce their carbon footprint and offer solutions that incorporate renewable building blocks.

Waterborne PU systems for demanding surfaces

We have developed high-performance waterborne solutions for highly demanding coating applications. Our polyurethane (PU) building blocks offer superior performance in coating systems, e.g., robustness, good mixing ability between resin and hardener, high mechanical, chemical and scratch resistance, very good film formation, and fast blocking. Besides naturally fulfilling all indoor emission and low-odor requirements for manufactured furniture, joinery or parquet flooring, our low-VOC waterborne PU building blocks help you and your customers achieve your sustainability targets.

What we do

As a world-leading polymer and material science company, we inspire innovation and drive growth through profitable products and technologies that benefit society and reduce the impact on the environment.

Who does all this?

It's our people! And the way we work together as one global team following a set of six elementary principles – value creation, sustainability, innovation, focus on people, safety and fair play. This is our formula for success.

Quality & supply security

Our products are of outstanding quality and we offer supply security – worldwide.

Covestro, the world's leading manufacturer of aliphatic and aromatic polyisocyanates, offers an extensive range of raw materials and services for the coatings and adhesives industry. This allows the very latest technology to be used extremely effectively for a variety of applications.

Our global setup enables you to increase your competitive advantage.

What we offer:

- A global network of research & development centers where our staff are dedicated to offering solutions for the coating and adhesive industry.
- A unique setup and worldwide network of state-of-the-art production sites ensuring short lead times and supply chain flexibility.
- Outstanding product quality through fulfilling the requirements of state-of-the-art quality, environmental and safety (HSEQ) as well as energy management standards; we are proud of having enjoyed ISO 9001, ISO 14001, ISO 18001 and ISO 50001 certifications for many years.

Covestro is your reliable partner for polyurethane chemistry.

Market- and customer-oriented – for your benefit

Our wide range of products is the outcome of our ongoing efforts to develop raw materials that meet the needs of the market. We offer a variety of customized raw materials and building blocks for the formulation of your wood coatings – all tried-and-tested solutions for a wide variety of wood coating applications. As a system supplier we are also well equipped to develop raw material packages in which our products are tailored to create the strongest possible package solution. This saves you time, money and a great deal of trial and error. As our range of products is one of the broadest and largest on the market, we are able to offer constructive solutions and highly effective support.

A global partnership

If you operate on an international basis, you can expect the same from your business partners. We are one of the world's leading suppliers of raw materials for wood and furniture coatings. Our experienced team provides technical backup all over the world, and our specialist laboratories support our customers in all the key furniture manufacturing centers of Europe, North America, Japan and China. Most of our products are registered in chemical inventories and therefore ready for sale in the most important markets. Moreover, we have agencies in more than 100 countries.

Closer to the customer

At Covestro we do our utmost to be as innovative as possible – so you enjoy the best possible solutions and service. It is an obligation we feel as result of our century of expertise and experience in this field. What our customers and the furniture industry in general demand defines the focus of our development efforts, e.g., in new technologies, timesaving application and cost-effectiveness. We supply products for water- and solvent-borne technologies that serve application methods such as spraying, roller or curtain coating and brushing. Our aim is always to develop raw materials that improve the performance of your products, reduce your process costs by optimizing curing processes, deliver excellent mechanical and chemical resistance, and thus increase the durability of your customers' end products. Our waterborne and waterborne UV-curing raw material portfolio is capable of solving any formulation problem – now and in the future. Our short processes save you time, increase productivity and help you to meet your targets in terms of sustainable and environment-friendly processes and products. Ultimately, it is your customers who will be grateful.

Innovations for quality and the environment

Our research scientists have always worked to develop new products and processes that meet market needs. Our Bayhydrol®, Bayhydrol® UV and Bayhydur® product ranges are impressive examples of the innovations achieved over the last two decades. But not wanting to rest on our laurels, we are constantly reviewing and improving both our products and processes. We have implemented a DIN EN ISO 9001 quality system and all our European facilities have been certified to this standard. This enables us to supply our customers with consistent high quality; after all, your satisfaction with our products and processes is our measure of success. Ensuring the environmental compatibility of our products is

another key task for our research scientists. For example, a key contribution to the development of environmentally friendly coatings was made with our water-thinnable Bayhydrol® and Bayhydur® products for air-drying, force-drying and radiation-curing coatings. Moreover, our orientation to the needs of the market drives us to find solutions to other problems, such as reducing emissions or disposing of waste in an environmentally sound manner.

Over the past century, Covestro has set many global milestones in the development of raw materials for wood coatings:

- 1905** Cellit: A raw material for low-flammable coatings
- 1943** Desmodur®: The first use of aromatic polyisocyanates as curing agents in coatings
- 1960** Desmodur® N: Another step forward in the development of polyurethane coatings
- 1965** Desmodur® HL: An aromatic/aliphatic polyisocyanurate (TDI/HDI)
- 1966** Desmodur® IL: A TDI-based polyisocyanurate
- 1981** Desmophen® A 450: The first fast-drying polyacrylate
- 1987** Bayhydrol®: A water-thinnable binder
- 1994** Bayhydur® and Bayhydrol®: Ideal for aqueous two-pack polyurethane coatings
- 1997** Bayhydrol® UV: UV curable polyurethane dispersions
- 2002** Bayhydur®: A new generation of hydrophilic polyisocyanates with excellent chemical resistance
- 2005** Bayhydrol®: Solvent-free PU and PU-PAC dispersions
- 2008** Bayhydrol® U: A solvent-free, OH-bearing PU dispersion for 2K waterborne systems
- 2015** Desmodur® eco N: The first biobased polyurethane hardener with 70% renewable content

Meeting your specific needs

Our market-leading position is based, not least, on a regular exchange of expertise and experience with our partners in the coatings industry. This ongoing dialogue with our customers enables us to continually pick up ideas for developing new or improved products. And we have a completely open mind with regard your chal-

lenges and the specific industry needs. In that respect, our Coatings Application & Development experts will be pleased to be of assistance anywhere in the world. Simply contact our technical staff and they will invest all their creativity to develop the suitable solutions and test them under near-service conditions.

Our technologies and products – your competitive advantage

There are many good reasons why polyurethane building blocks are an ideal solution for wood coatings: their high quality, ability to enhance the natural properties of wood, resistance to solvents and chemicals, toughness and flexibility, to mention just a few. These building blocks enable the formulation of both clear coats and pigmented systems, which yield high-gloss, high-bodied films with excellent flow properties and outstanding mechanical properties, for example. Another reason for the popularity of polyurethane coatings is their highly variable property profile. Our polyurethane coating systems can be tailored for a specific application by varying the molecular structure of the soft segments, the distribution and length of the hard segments, or the molecular weight and degree of chain branching. The many decades of expertise and experience we have gained as the inventors of polyurethane chemistry enable us to deliver the customized solutions you need through the selection of the most suitable polyisocyanate and polyol components:

- 1K and 2K solvent-borne systems based on highly branched polyols and crosslinkers
- Waterborne 1K and 2K polyurethane coatings consisting of aqueous dispersions, in many cases combined with a water-dispersible polyisocyanate
- Waterborne UV-curing polyurethane dispersions containing acrylic double bonds, which can additionally be crosslinked by radical polymerization to achieve high-quality coatings.

Form and function in furniture

The furniture in a home, office or garden, wood-based front doors and windows or terracing has an aesthetic significance that goes well beyond their mere functionality. The raw materials we develop for formulating wood coatings help to maintain the look and feel of wood-based furniture despite such potentially damaging chemical influences as hand creams or everyday scratches. In the case of wood-based front doors, garden furniture, terracing and other outdoor applications, the excellent mechanical properties and wide variety of application technologies polyurethane coatings offer are a key advantage.

Perfection in parquet flooring

What have parquet flooring and PU-based coatings in common? They are both designed for a long life cycle, are very resistant and are superior to alternative solutions. Our raw materials developed for formulating industrial or site-applied coatings for parquet flooring help to protect the beautiful looks of a parquet floor. Whether 1K, 2K or UV-curing, our waterborne-based PU coating raw materials are the right answers to your coating formulation requirements. Besides, we are constantly working to improve our products to enable you to formulate PU-based coatings that fulfill the highest performance and environmental standards in the industry.

Protective coatings for joinery products

The polyurethane-based raw materials we develop for the formulation of protective coatings for joinery products help to protect front doors and other highly visible wood-based products against a wide variety of harmful chemical influences.

Bayhydrol® A:

Aqueous acrylic polyol dispersions for waterborne 2K PUR systems

Our Bayhydrol® A dispersions are OH group-containing resins tailor-made to be combined with our Bayhydur® range of water-dispersible polyisocyanates. The resulting waterborne 2K polyurethane coatings combine extremely

high chemical and mechanical resistance with versatile use and application. Possible applications include clear and pigmented furniture coatings, interior and exterior joinery, and hardwood floor coatings.

Bayhydrol® U:

Aqueous polyurethane polyol dispersions

Our new generation of solvent-free OH-functional polyurethane dispersions is further improving the performance of waterborne environmentally friendly 2K polyurethane coatings. Coating films made with the new Bayhydrol® U dispersions display a wide spectrum of properties, ranging

from hard through to flexible or even a pleasant velvety soft feel, and thus provide a toolbox for the formulation of almost every specific coating. Final coatings with very low VOC content are possible, depending on the Bayhydrol® grade chosen and application requirements.

The values indicate the performance of these binders in a 2K formulation crosslinked with Bayhydrol® 2655 (80% in MPA); NCO : OH ratio 1.5.

Bayhydrol® UH:

Aqueous high molecular weight polyurethane dispersions

Polyurethane dispersions have been in use for years and they are nowadays one of the leading technologies for parquet coatings. The clear advantages include outstanding mechanical properties, mild odor, ease of application and rapid curing.

The choice of the right Bayhydrol® UH grade allows the formulation of coatings with the necessary hardness, elasticity, abrasion resistance, black heel mark resistance and chemical resistance.

Introducing fatty acids into the chain increases the crosslinking, resulting in greater chemical and black heel mark resistance. Film properties can be enhanced by adding a polyisocyanate to produce a high-quality 2K coating. We offer these hydrophilic polyisocyanates under the brand name Bayhydur®.

Bayhydrol® UV:

Waterborne radiation curing resins

The most promising technology amongst the various environment-friendly wood coating systems are UV-curing polyurethane dispersions. UV waterborne technology is the fastest curing waterborne coating technology, that has a high

crosslink density, and offers close to 0% VOC and overspray recycling. Advantages that make this technology particularly suitable when higher productivity is required.

Bayhydur®:

Hydrophilic polyisocyanates for 2K waterborne polyurethane systems

The key to the waterborne 2K PU systems for wood application is the use of hydrophilic polyisocyanates, which have to be completely homogenized into the aqueous phase. In 1994, Covestro offered the first of these products under the trade name Bayhydur®. These hardeners do

not contain surfactants and are specially designed for combination with our Bayhydrol® types, and meet the most important needs of today's market. By choosing the right type of Bayhydur® it is possible to adjust the performance of the coating system to meet your specific requirements.

Desmophen®:

Polyester polyols for 2K polyurethane coatings

Due to their enormous versatility, raw materials for polyurethane coatings have gained the highest shares in world's markets for wood and furniture coatings. The tremendous variability in resins

structures leads to a high versatility in properties. The many requirements resulting from specific demands of different kinds of wooden substrates can be satisfied by using tailor-made PU coatings.

Desmophen® 1700	Linear polyester	100%	17,500	1.3	Flexibilizing resin to improve toughness, durability and abrasion resistance in coatings.	○	●	
Desmophen® 1300 X	Fatty acid-modified branched polyester	75% X	3,450	3.2	For clear and pigmented primers, fillers and topcoats.	●		
Desmophen® 1300 BA		75% BA	1,000	3.2		●		
Desmophen® 1300 PR		75% X	7,250	3.1		●		
Desmophen® 1400 PR		75% MIBK	13,000	3.2	Highly reactive, high surface hardness, easy matting.	●		
Desmophen® PL 300		60% X	5,350	2.7	Hard, highly reactive and long pot life.	●		
Desmophen® PL 800		70% X	1,500	2.5	Good pigment wetting, flexible, high yellowing resistance, low application viscosity.	●		
Desmophen® PL 817		75% X/MEK	10,000	3.3	Highly reactive; used in combination with highly condensed types in sealers to increase solid content.	●		
Desmophen® 881 X		75% X	12,500	3.6	Good pigment wetting, low yellowing; for clear and pigmented glossy coatings.	●

Desmophen® NH:

Polyaspartic ester polyols for 2K polyaspartic coatings

The European VOC legislation is leading to an increased demand for coatings with a reduced content of organic solvents. Very high solids (VHS) coatings offer a variety of possible application fields with still optimal durability, optical and mechanical properties as well as application robustness. Our Desmophen® NH polyaspartic

ester range offers the possibility to formulate 2K polyaspartic systems with very high solids content and that are very fast drying. The use of low viscosity HDI isocyanurates like Desmodur® N 3390 or Desmodur® N 3900 is highly recommended as partners to produce very high solid 2K-polyurea coatings.

	TYPE	SUPPLY FORM	VISCOSITY AT 23°C [mPa · s]	EQUIVALENT WEIGHT	PROPERTIES AND APPLICATION	FURNITURE
Desmophen® NH 1420	Aminofunctional resin	100%	1,450	276	Very high solids 2K PUR and solvent-free fast drying coatings.	○
Desmophen® NH 1520	Aminofunctional resin	100%	1,400	290	Very high solids 2K PUR and solvent-free coatings.	○
Desmophen® NH 1521	Aminofunctional resin	90% BA	160	326	90% solid version of NH 1520.	○
Desmophen® NH 2850 XP	Aminofunctional resin	100%	100	295	Very high solids 2K PUR and solvent-free coatings with higher impact resistance.	○
Desmophen® NH 1422	Aminofunctional resin	100%	1,450	276	Version of 1420 with extended pot life.	○

Desmodur®:

Polyisocyanates for 2K polyurethane systems

A broad range of polyisocyanates with different structures and supply forms enables you to select the combination of your choice for each

and every formulation in wood and furniture coatings.

Polyisocyanate properties

TYPE	SUPPLY FORM	VISCOSITY AT 23°C [mPa · s]	NCO CONTENT [% ON SUPPLY FORM]	PROPERTIES AND APPLICATION	PARQUET			
					FURNITURE	EXTERIOR	EXTERIOR	
Desmodur® UL 75 XP	TDI adduct	75% EA	1,600	13.3	Ultra-low monomer grade of Desmodur® L 75.	●	○	
Desmodur® L 75		75% EA	1,600	13.3	Tough but flexible, all-purpose hardener for polyester and fatty acid-modified polyester.	●	○	
Desmodur® L 67 BA		67% BA	600	11.9		○	●	
Desmodur® L 67 MPA/X		67% MPA/X	1,600	11.9		○	●	
Desmodur® IL EA	TDI isocyanurate	51% EA	700	8.0	Highly reactive hardener for polyester and fatty acid-modified polyester.	●	○	
Desmodur® IL BA		51% BA	2,000	8.0		●	○	
Desmodur® IL 1351		51% BA	1,300	8.0		●	○	
Desmodur® IL 1451		51% BA	250	7.4	Highly reactive low-viscosity hardener with good compatibility for polyester and fatty acid-modified polyester.	●	○	
Desmodur® HL BA	TDI/HDI isocyanurate	60% BA	2,200	10.5	Reactive hardener with low yellowing for polyester and fatty acid-modified.	●		
Desmodur® HL EA		60% EA	1,100	10.5	Polyester.	●		
Desmodur® N 100	HDI biuret	100%	10,000	22.0	Highly flexible hardener with resistance to yellowing for polyacrylates.	●		
Desmodur® N 75 BA		75% BA	160	16.5		●		
Desmodur® N 75 MPA		75% MPA	250	16.5		●		
Desmodur® N 75 MPA/X		75% MPA/X	250	16.5		●		
Desmodur® N 3300	HDI isocyanurate	100%	3,000	21.8	Low viscosity, resistant to yellowing and chemicals.	●		○
Desmodur® N 3390 BA		90% BA	500	19.6		●		○
Desmodur® N 3600		100%	1,200	23.0	Low viscosity hardener for non-yellowing high solids and waterborne coatings.	●		○
Desmodur® N 3790 BA		90% BA	1,800	17.8	Highly functional hardener for fast-drying, chemical resistant and non-yellowing coatings.	●		○
Desmodur® N 3900		100%	730	23.5	Low viscosity hardener for non-yellowing high solids and waterborne coatings.	●		○
Desmodur® N 3580 BA	HDI allophanate	80% BA	500	15.4	Highly functional hardener for scratch-resistant and non-yellowing trimer coatings; specially recommended for self-healing coatings.	●		○
Desmodur® eco N 7300	PDI Isocyanurate	100%	9,500	21,5	Contains 70% renewable carbon. Outstanding weather stability and gloss retention, non-yellowing.	●		○

Desmodur® E:

Moisture-curing polyisocyanates for 1K and 2K polyurethane systems

For many years, 1K polyurethane coatings based on Desmodur® E have set the industry standard. Desmodur® E types are especially suitable for use in formulating transparent wood coatings, e.g., for parquet flooring and for wall and ceiling paneling. Their outstanding resistance to wear and non-slip characteristics mean that they are the systems of choice for public buildings, dance halls and multipurpose halls. Such coatings can withstand extreme loads over long periods and

are thus highly cost-effective. Coatings based on Desmodur® E always dry in the presence of moisture. Drying time, hardness development and application properties depend to a high degree on the ambient temperature and humidity conditions. To take account of the wide variation in these conditions, we offer a range of adapted products for use in every region of the world and application requirement.

We help make wood a star.

**Key to the abbreviations
used in the tables**

General:

HDI	Hexamethylene diisocyanate
MDI	Diphenylmethane diisocyanate
MFFT	Minimum film formation temperature
NCO	Isocyanate
OH	Hydroxyl
PAC	Polyacrylate
PDI	Pentamethylene diisocyanate
PU	Polyurethane
PUD	Polyurethane dispersion
TDI	Toluene diisocyanate
UA	Unsaturated acrylate
UP	Unsaturated polyester

Solvents:

BA	Butyl acetate
BG	Butyl glycol
DPGDME	Dipropylene glycol dimethyl ether
EA	Ethyl acetate
MEK	Methyl ethyl ketone
MIBK	Methyl isobutyl ketone
MPA	1-Methoxypropyl acetate-2
NMP	n-Methyl pyrrolidone
PGDA	Propylene glycol diacetate
PnB	Dowanol PnB
SN	Solvent naphtha 100
X	Xylene

Fast-lane access to polyurethane innovations

At Covestro, innovation is in our DNA. Ever since Otto Bayer discovered polyurethanes in 1937, we have been driving polyurethane innovations in coatings and adhesives as well as in other application areas. As our partner, you enjoy fast-lane access to polyurethane innovations, and can help us in developing the next generation of polyurethanes to meet the industry's upcoming challenges and needs. What can we offer you?

- Powerful know-how on both established and new polyisocyanates, as well as on new polyurethane hybrid technologies.
- The prospect of new application technologies to enable efficient processes.
- More sustainable, biomass- or CO₂-based materials that do not sacrifice high performance.

Join us to shape the future!
