| <b>Applications</b>               | All body parts   | Face and sensitive parts   | Bikini and sensitive parts  |

### ✔ ABWax® Depil: hair removal procedure

1. Make sure skin is dry. Prepare a quantity of ABWax® Depil wax and preheat in a melter. According to the body part, temperature and wax type should be adapted

2. ABWax® Depil wax is ready to use when it achieves a homogenous consistency

3. Using a spatula, spread a layer of ABWax® Depil wax (thickness of 1 to 2 mm) onto the treated skin area toward hair growth direction. Let the end of the layer thicker to remove more easily.

4. Wait until ABWax® Depil wax strip becomes dry to the touch

5. Remove the tape from the thick end in one go (fast movement in direction in the opposite direction of hair growth, no strips paper are required)

6. Repeat procedure at the next section (apply wax on the same section not more than two times)

7. At the end, remove wax residues using after-wax lotion

✔ **Typical dosage:** from half leg: 250 – 400g max, bikini: 20 - 30g, underarms: 20 - 30g
