

VLDPE made via Spherilene Process

Product data sheet 10502

10502 is a VLDPE cast film grade designed for coextrusion applications, as adhesive layer. 10502 is particularly suited for applications requiring low film stiffness, good sealability and high strength at low temperatures.

VLDPE: 10502

Density: 0.910

MFI: 2.5

Features

- VLDPE cast film grade
- low film stiffness
- good sealability
- high strength at low temperatures

Applications

- Cast film grade
- Cast coextrusion

Additives

- THERMAL ANOTIOXIDANT

76

Material properties (This data are typical values and are not to be construed as product specifications.)

Resin properties	Unit	Typical values	ASTM Method
Melt Index	(g/10')	2.5	D 1238
Density	(g/ml)	0.9100	D 1505
Recommended processing conditions			
Skin layer in coextruded cast film			
Melt Temperature	(°C)	230-280	
Thickness	(micron)	15-50
