

Data Sheet Issue 03/2012

BYK-P 9085

Processing additive with mold-release and surface-enhancing properties for Low Profile and Class A SMC.

Product Data

Composition

Combination of surface-active substances and polymers

Typical Properties

Values indicated in this data sheet describe typical properties and do not constitute specification limits.

Acid value : Density (68 °F): Refractive index (68 °F): Non-volatile matter (10 min., 302 °F):

88 mg KOH/g 7.68 lbs/US gal 1.47 > 97 %

Food Contact Legal Status

For the current food contact legal status, please contact our product safety department or visit www.byk.com for further information.

Applications

SMC

Special Features and Benefits

BYK-P 9085 was developed for Low Profile and Class A SMC systems. It stabilizes the compound and improves flow behavior. Because of its excellent mold-release properties, BYK-P 9085 completely replaces the traditional mold-release products. BYK-P 9085 improves the surface quality of the molded part. It also improves the paint adhesion and the bondability of the molded parts.

Recommended use

BYK-P 9085 is recommended for LP and Class A compounds.

Special Note

BYK-P 9085 affects thickening. An additional 10 % MgO may be needed to achieve thickening properties comparable to the Zn/Ca stearate system.

Data Sheet Issue 03/2012

Recommended Levels

5-6 phr of the additive (as supplied) based upon total resin. Optimal levels are determined through a series of laboratory tests.

Incorporation and Processing Instructions

Stir while adding after the UP resin and LP components have been homogenized. Traditional mold-release products must be removed from the formulation.
